STATEMENT OF PRODUCT DURABILITY FOR UNREFRIGERATED SHIPPING

Terra Vegane meat alternative products are packaged under vacuum and heat treatment. This process ensures that the products are preserved in the best manner possible and with the longest shelf life possible. The pasteurization that occurs during the packaging also ensures that the products are durable for short term unrefrigerated transport under normal weather conditions.

Although this process should technically make the products shelf-stable for long term storage, we are still waiting on laboratory results and certifications to declare so.

At this time, we recommend that, once received after unrefrigerated shipment, the products be refrigerated until final sale or time of use.

We are at your service to provide more information or answer any questions that you may have.

Best regards,

Jarrod Ducat
CEO Terra Vegane Europe GmbH
